UNIQUE PATIENTS - SPECIFIC INDICATIONS - ONE SYSTEM

Medacta® Spine has developed a portfolio of spine implants designed to complement one another.

The M.U.S.T. Pedicle Screw System, the MectalIF® Family of Interbody Fusion Devices and our Suite of Specialized Surgical Instruments create a harmonized, single-system approach for most spine stabilization applications.

Traditional and MIS surgical approaches are supported.

M.I.S.: MAKE IT SIMPLE!

Medacta® International has designed a Mini-Open approach that utilizes our M.U.S.T. Pedicle Screw System and all the familiar instruments our Customers have endorsed...with a twist:

- Option to provisionally lock the M.U.S.T. screw without a rod to perform parallel compression and distraction with our specially designed Mini-Open Retractor as your mechanical advantage and control.
- Large visual in-situ exposure.
- Low profile parallel screw distraction.
- Accommodates 1 and 2 level surgeries.
- The Percutaneous Tower option is currently in the final phase of development.
