

FastShuttle CC

SUTURE PASSER CAPSULAR CLOSURE

DESIGNED FOR A SIMPLIFIED ARTHROSCOPIC CAPSULAR MANAGEMENT

OUTSIDE-IN SUTURING TECHNIQUE

1 Loop a USP#2 suture and load it on the proximal jaw groove.

2 Squeeze front trigger to compress jaws and enter portal.

3 Hook the lower jaw under one rim of the capsule and squeeze both triggers to pass the suture loop through rim.

4 Retrieve suture loop out of the portal and disengage loop.

5 Load one of the free suture strands on the FastShuttle CC groove.

6 Pass instrument shaft through the suture loop and enter portal again in a closed jaw position.

7 Fire the suture through the opposite rim of the capsule.

8 Retrieve the FastShuttle CC device and release suture.

9 Pull the free strands to close the capsule.

10 Perform arthroscopic knots to secure the closure and cut the remaining sutures with an arthroscopic suture cutter.

TIPS

1 Pull firmly to engage suture in groove.

2 Activate the needle slightly by pressing the back trigger and load the suture on the needle before compressing jaws.

3A Disengage suture best by squeezing back handle to open back trap. Release suture by pulling on one limb of the suture loop only.

ORDERING INFORMATION

Order Number	Description
05.11.10.0050	FastShuttle CC – Suture Passer Capsular Closure
05.11.10.0051	FastShuttle CC – Disposable Needle STERILE (5 ea)
