

LATERAL CONNECTORS & HOOKS

Short

Long

Lateral connectors compensate the medio/lateral offset between the screw tulip and the rod.

Straight

Offset

Angled

A comprehensive set of hooks ensure appropriate anchorage on the laminae.

SYNERGY

The M.U.S.T. MINI posterior cervical screw system has been designed to work with the M.U.S.T. Pedicle screw system for surgical procedures that necessitate extension into the thoracolumbar spine.

This document is intended for the US market.

The **M.U.S.T. MINI** posterior cervical screw system is a **comprehensive system** for fixation of the posterior cervical and upper thoracic spine. It offers a variety of screws, hooks, rods, and connectors that allow the surgeon to tailor the construct to the specific patients anatomy and pathology to be treated.

HIGH POLY-AXIALITY

The **broad range of motion**, up to 96° for the overall cone angle, eases the surgical practice in challenging anatomies.

UNIQUE FRICTION HEAD

M.U.S.T. MINI posterior cervical screws feature a **friction head** to facilitate **rod placement** and **ease reduction maneuvers** intraoperatively.

COMPREHENSIVE SOLUTION

Screws:

- **Solid & Cannulated** Ø3.5, 4, 4.5mm
- **Full and partially** threaded

Self-stabilizing tulip to simplify rod insertion

Rods:

- **CoCr** for superior construct stiffness
- **Transition rods** for cervico-thoracic fixation

TRANSVERSE CONNECTORS

Further stability can be added to the overall construct with the insertion of transverse connectors:

Rod-to-Rod connector to enhance the construct torsional resistance

Head-to-Head Cross connector fixed on the screw tulip provides stabilization where rod-to-rod connector can not be positioned
