

There are a number of solutions, surgical and non-surgical to treat your disease. Ask your doctor what is the most suitable treatment based on your age, activity level and expectations.

## MyKnee, a solution designed for you

MyKnee is a precision instrument which is tailored for each individual patient from a radiological image of their knee.

MyKnee technology allows **MORE ACCURATE, FASTER AND LESS TRAUMATIC**, total knee replacement.

If you have any concerns about your new knee don't hesitate to contact your doctor and, finally...  
**...enjoy your new knee!**

## THE OPERATION TAILORED FOR YOU!

## Suffering from knee pain?

If your knee pain limits your daily activities, affects your mood, your health and your general well-being...

**YOU'RE CERTAINLY NOT ALONE!**

## Are you considering Total Knee Replacement?

## What is osteoarthritis?

The knee joint comprises three bones: thigh bone (femur), shin bone (tibia) and kneecap (patella) the ends of which are covered by a smooth surface (cartilage) which allows movement.

The main cause of knee joint diseases is the wear of the cartilage: osteoarthritis. **This wear is perceived as pain.** In the case of advanced osteoarthritis your doctor may suggest that you undergo a total knee replacement.

## Why a Total Knee Replacement?

Total knee replacement surgery substitutes the damaged bone and cartilage of the joint with polyethylene (a plastic material) or metallic components.

The main benefits of a successful total knee replacement are:

- 1 Reduction in knee pain**  
The pain will be rapidly and dramatically reduced.
- 2 Recovery of mobility**  
With less effort, you will regain close to the original mobility of your knee.
- 3 Improvement in quality of life**  
Your everyday activities and your social life won't be limited by pain and reduced mobility anymore!

## Why choose a MyKnee Total Knee Replacement

MyKnee technology enhances the benefits of a standard knee replacement by offering a **more accurate, faster and less traumatic procedure, through the use of surgical instruments tailored to each patient.**

- **MORE ACCURATE POSITIONING OF THE PROSTHESIS**  
MyKnee fits the shape of the knee perfectly, allowing an accurate preparation of the bone to receive the prosthesis.<sup>[1,2]</sup> It has been proven that an accurate positioning of the prosthesis leads to an increased survival of the implant.<sup>[3]</sup>
- **LESS TRAUMATIC PROCEDURE**  
The conventional procedures require opening the medullary canal of the bone in order to achieve a safe positioning of the surgical instruments used to position the prosthesis. MyKnee eliminates the need of medullary canal violation by producing customised extra-medullary jigs. Clinical studies demonstrate that the blood loss and the risk of embolism dramatically decrease if the medullary canal is left intact.<sup>[3,4,5]</sup>
- **FASTER OPERATION**  
The use of MyKnee technology is very simple and straightforward. It potentially allows the surgeon to reduce the operating time, thus decreasing the time under anaesthesia and the risk of infection.<sup>[6]</sup>

## Conventional procedures and MyKnee

The positioning of a knee prosthesis is performed using surgical instruments which prepare the bone to receive the prosthesis.

### CONVENTIONAL PROCEDURES

In the conventional procedures **the surgical instruments are the same for all patients.**

### MyKnee: THE INNOVATION

MyKnee is a surgical instrument which **fits your knee perfectly, because it is tailored for you.**

The MyKnee allows preparation of the bones to receive the prosthesis, respecting the characteristics of your anatomy.

**MyKnee**

DESIGNED FOR YOU, BY YOU

## The MyKnee adventure

- 1 Obtain an image of your knee**  
The surgeon will ask you to have a diagnostic scan (CT or MRI) of your leg.
- 2 Replication of your knee**  
Medacta will create a plastic 3D model of your knee using the image of the diagnostic scan.
- 3 Creation of MyKnee**  
Using the model of your knee, Medacta and your surgeon create your personalised surgical instruments.
- 4 Preparation of surgery**  
Prior to surgery, your surgeon will receive the MyKnee instruments and a plastic replica of your knee. This will be analysed to prepare accurately for your knee operation.
- 5 ...enjoy your new knee!!!**
