

SAGITTAL BALANCE TREATMENT AT 360°

A UNIQUE SYNERGY

MySpine & MectaLIF Anterior, a unique synergy for improved restoration of sagittal balance.

- Proper **sagittal** and **coronal alignment** thanks to hyperlordotic cages in combination with posterior correction
- Recovery of the Spino **Pelvic harmony**
- **Circumferential approach** in combination with MySpine MC minimally invasive surgery
- **Decreased complications** than traditional pedicle subtraction osteotomies (PSO)

IDEAL DISTRIBUTION OF LUMBAR LORDOSIS^[4]

The addition of the 20° degree hyper-lordotic cages provides surgeons the chance to recover effective alignment between L4 and S1, where 70% of lumbar lordosis is located^[4].

M.U.S.T. PEDICLE SCREWS COMBINED WITH MECTALIF ANTERIOR

360° surgery may combine anterior fusion with efficient posterior correction.

TIPEEK TECHNOLOGY

The customizable modular anterior stand-alone implants, in conjunction with the suite of MectaLIF TiPEEK plasma-sprayed titanium coated cages, represent an added value to improved stability and enhanced fusion rates^[5].

PATIENT MATCHED TECHNOLOGY
IN SPINE SURGERY

MySpine is a 3D printed patient specific guide that allows accurate pedicle screw placement, whilst reducing the surgical time and intra-operative X-ray radiation.

Unique anatomies
Patient-Matched solutions

MYSPIKE INDICATIONS

MySpine Standard and Low Profile guides are suitable for challenging deformities and long constructs. MySpine MC for MIDLINE CORTICAL approach with favorable screw cortical trajectory represents a dedicated solution in MIS surgery with muscle sparing benefits.

STANDARD

LOW PROFILE

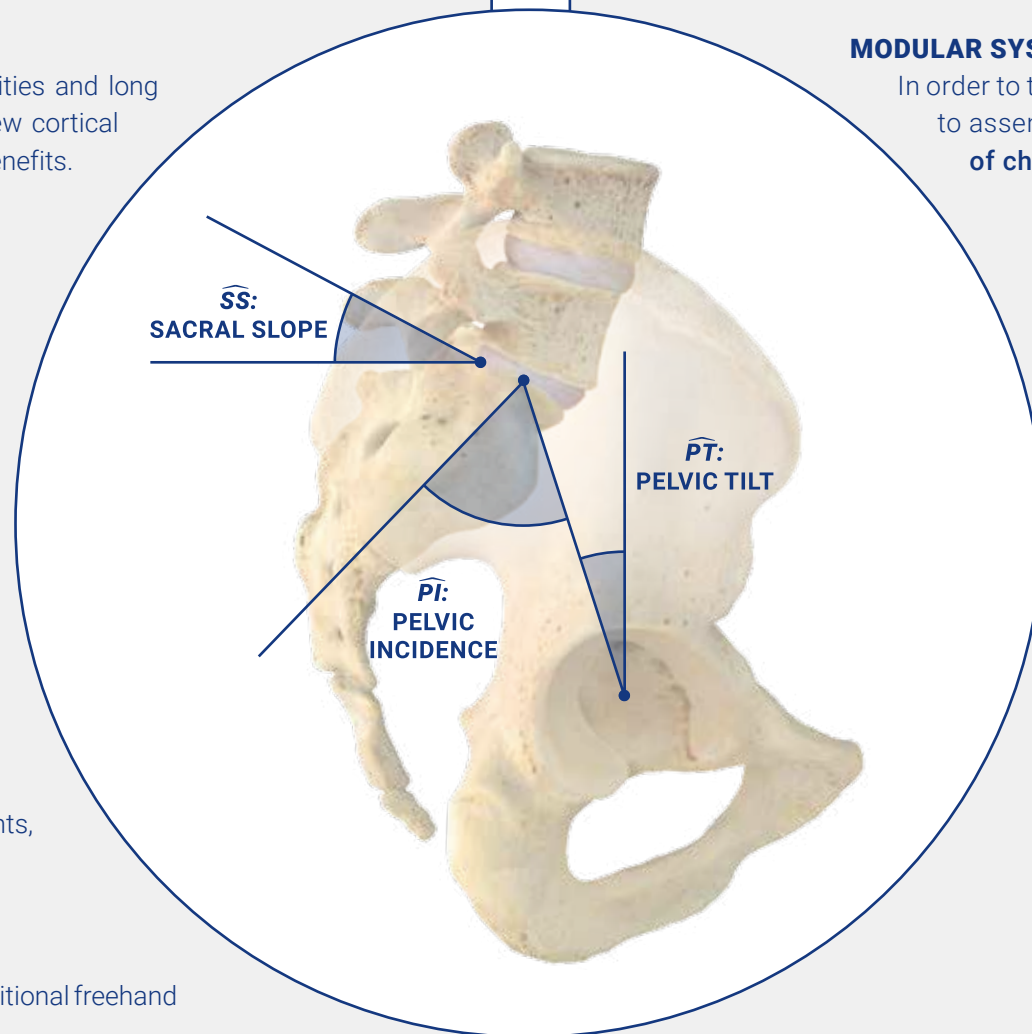

MIDLINE CORTICAL

PRE-OPERATIVE PLANNING

The surgeon determines the pedicle screw parameters: Trajectory, Entry points, Diameter and Length.

ACCURATE SCREW POSITIONING

Literature shows that MySpine technology may achieve greater accuracy than traditional freehand approaches and comparable performance to navigation assisted technique^[1,2,3].

ANTERIOR LUMBAR INTERBODY FUSION DEVICE

The Medacta MectaLIF Anterior Lumbar Interbody Fusion Device offers an unprecedented MODULAR design that incorporates the benefits of an anterior plate and a radiolucent interbody spacer.

Modular design
offers freedom of choice

MODULAR SYSTEM

In order to treat specific anatomical requirements and pathologies, the surgeon has the ability to assemble any of the 4 available plates intraoperatively giving the complete **freedom of choice!**

CAGE PLATE ASSEMBLY

ASSEMBLED CONSTRUCT

Modular design allows intraoperative assembly to create an indication-specific interbody fusion device.

HYPERLORDOSIS

Hyperlordotic cages are capable to individually restore up to 20° of lumbar lordosis.

CAGE LORDOSIS
