Using the dedicated handle, insert and advance the desired Vertical Cutter up to the desired graft length, to define graft width.

Insert and advance desired Horizontal Cutter across the desired graft length to define the graft thickness.

With the Subcutaneous Cutter fully open, insert the graft segment into the dedicated ligament slot.

Depress the Subcutaneous Cutter handle to lock ligament within the slot and advance the instrument to desired graft length.

Once at the desired graft length, retract the locking mechanism slider to free the handle and perform the proximal cut.
