Medacta's TiPEEK cages represent the next generation plasma sprayed Ti-Coated interbody fusion device designed to:

• promote high level fusion rate
• provide a clear diagnostic assessment
• deliver improved stability

Titanium-coated PEEK cervical and lumbar cages offer appropriate properties with regards to biocompatibility and biomechanical behavior.

MySpine MC

MySpine MC is a 3D printed patient matched solution in the midline cortical approach. Posterior lumbar fusion is driven in a minimally invasive, muscle sparing way, potentially allowing for shorter operating times and a reduction of both radiation exposure and costs.

MySpine is a patient specific pedicle screw placement guide that, thanks to the 3D pre-operative planning, supports the surgeon during the critical steps of pedicle screw placement in order to:

• improve accuracy
• reduce the surgical time
• reduce X-ray radiation to patients and OR Staff

This innovative concept combines different features to offer potential benefits to both the surgeon and the patient.

MySpine MC is a patient matched solution in the midline cortical approach. Posterior lumbar fusion is driven in a minimally invasive way, potentially allowing for shorter operating times and a reduction of both radiation exposure and costs.

SPINE PORTFOLIO

A COMPLETE RANGE OF SOLUTIONS

CERVICAL

Mecta-C SYSTEM
A comprehensive system of cervical interbody fusion cages and anterior plates for cases of degenerative disease, trauma, tumours and deformity.
Large range of implant sizes and lordosis to accommodate different patient anatomies.

LUMBAR

MectaLIF ANTERIOR
Modular cage and plate design provides the surgeon with intra-operative freedom of choice.
Multiple configurations to cover diverse patient anatomy and surgical needs.

SACRO-ILIAC

M.U.S.T. SACRO Iliac
The M.U.S.T. Sacro Iliac System is designed for the sacroiliac joint fusion for patients suffering from degenerative sacroiliitis and sacroiliac joint disruptions.

CERVICAL

M.U.S.T. MINI
A simple and flexible solution for posterior cervical spine fixation that allows the surgeon to assemble the desired construct according to the anatomy of the patient.

THORACOLUMBAR

M.U.S.T.
Versatile and comprehensive pedicle screw system designed to provide flexibility to the surgeon.
Harmonious, single-system approach for most spine stabilization applications.

MectaLIF SYSTEM
A complete system of cages for solid initial fixation, and long term spine stabilization.
Versatile interbody fusion devices platform with a variety of anatomic shapes to address your unique patients.

M.U.S.T. MIS SYSTEM
M.U.S.T. MIS Platform: an effective and harmonic concept in terms of minimally invasive solutions.
The Mini Open Retractor along with the M.U.S.T. Percutaneous System is a comprehensive system that allows the surgeon to perform a specific surgical technique.
